

We deny most of ourselves.

We deny panpsychism & refuse to allow ^{to} our Past, will & intelligence. We deny ^{to} the Group Mind & the Life Mind & the Earth Mind... & God, will & intelligence, & these are our Future.

We are left with our Present, which is a quite unreal abstraction. For it won't work. All its processes are ↓ pastwards & ↑ futurwards. The working of the world is in concrete Time.

Take any experience of yours, say your seeing a play. You laugh, or thrill, or weep perhaps. A thousand shades of emotion come ego. Is it you who react to?

Yes, if 'you' means your whole Self. You, the narrow you, could never behave thus. Only Life - & not even Life; Earth - but not even Earth - Sun --- the Whole. Only the Whole has the necessary background to behave as you behave.

To see your actions as those of Life or Earth etc is not merely a legitimate viewpoint: it is

only this that we can see them concretely &
can have any hope of understanding them. It
lures the Earth to behave as 'you' behave
- the Earth & more than the Earth.

A whole may of course be inferior in various qualities to its members, but not to its members qua members of that whole.

Thus an institution may be inferior to its members - but not to that aspect of each of its members of which it is the organisation.

Is the Earth inferior to you its members? Yes, but not to you qua molecules.

But the Earth is not inferior, but infinitely superior, in concrete time.

21 26

Determinism. All will is from above. You cannot go against this will, but can only distribute it amongst your sub-selves.

C.S. And since the Will is from God I can do no ^{evil?} A. Evil is imperfection, & all you do is imperfect. One will-deed of yours, even the 'best', needs the World to complete it. Everything is evil in this sense, though all the myriads of separate evils are, as the whole, perfect & good. The perfect man is the whole man. None is good save God.

XX XXII XXII

21 24a 27

Epistemology. Since the sun in you (atom) thinks of the sun, & the earth in you (molecule) of the earth, & life in you of life, you may well think true thoughts.

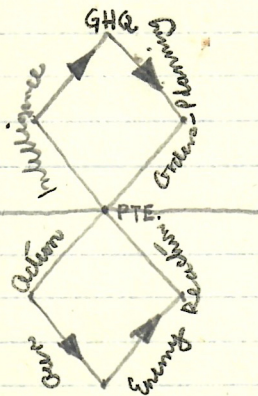

But your human thinking is utterly embedded in the Universal thinking. It cannot but be true for you, & have a certain universal status also. This book is written by the World, though its relevance is human.

Ambivalence in dreams. The Race Mind puts ^{ideas} across, during the quiescence of your will, race (fears & memories?) which appear on the representation side as dreams. But your superconscious has to put its ideas across through your sub-selves, which have their own inferior axes to grind. Hence the ambivalence.

Dreams are not actually, & will is super, so that dreams are not so likely to have 'super' or denitive content.

STAFF WORKOPERATIONS

1. Pte reports to Intelligence Sgt enemy soldier's movements.
2. Sgt collates various Ptes reports & informs intelligence officer.
3. And so on up to GHQ.
4. GHQ has a General plan.
5. Each Army Commander is told his section of the plan.
6. He divides the work amongst his Divisional Commanders
7. And so to Pte, who's given his Orders.

8. Which he carries out. But he is one of many who act. As he does his part the effect of the Plan unfolds: the Company is seen to act, the Battalion, the Division & so forth.

9. The Enemy's response is to act. His Army acts, his Division acts & so on, & Our Private again has a report to make about an Enemy soldier.
And so on.

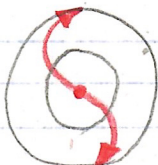

But the Enemy is but an aspect of ourselves; the Private's fight for both sides & Enemy G.H.Q. & ours are the same.

Water-divining. Is not this a case of molecular sense? Your molecules are aware of all Earth's molecules, & more particularly of those near to you, just as your atoms are gravitationally aware of all the SS's atoms, & your electrons of all the U's electrons. The dowser is a man whose subconscious is in some way particularly accessible. He uses his molecular sense. One day we may be able to use our atomic sense, & 'feel' the weight of things at a distance, or our electronic sense & 'feel', say, wireless waves. (over)

The subconscience molecular sense corresponds to or
is an aspect of the superconscious Earth's mind.
The Dowser may be looked on as in touch with
his superconscious, perhaps?

A

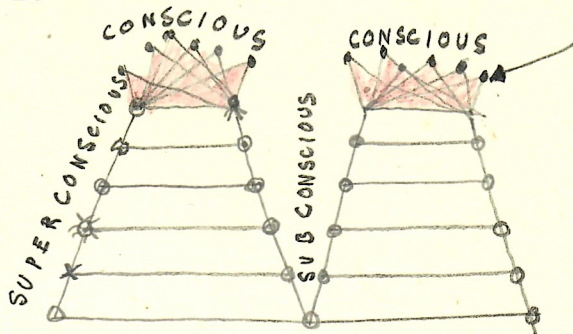

B

We think of all things happening as at A. But they happen as at B. All arrows begin, centre, & end in God. You do or think nothing

in your restricted self. All is done in your Whole Self. When you think of God, Earth & cells & molecules are 'thinking' in their several ways of Him. When you worship your cells worship too, in their way. They worship not only superconscious in your conscious, but they contribute to & are that superconscious.
