### **Mt Cattlin Gold Project** **Commencement of Geophysical Surveys**

High-resolution Aeromagnetic and Induced Polarisation (IP) surveys have commenced at Traka's Mt Cattlin Gold Project. Data resulting from the surveys will start to become available over the next few weeks and will be used to assist design of the drill program currently scheduled for November.

There are a number of obvious drill targets located on old abandoned gold mines and below and along strike from previous high-grade drill intersections (1) but the additional state-of-the-art geophysical information will provide definition of the larger linking structures to these mineralised bodies (Figure 1).

Figure 1. Compilation plan showing existing gold soil geochemical anomalism, past IP survey results, existing prospects and all drill hole collars with selective peak assay results.

Patrick Verbeek  
**Managing Director**

COMPLIANCE STATEMENT

*The information in this report that relates to Exploration Targets, Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr P Verbeek who is the Managing Director of the Traka Resources Limited. Mr Verbeek, who is a Competent Person and a Member of the Australasian Institute of Mining and Metallurgy, has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Verbeek consents to the inclusion in this report of the matters based on the information in the form and context in which it appears.*
